PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience (4+ years including internships). Currently working at Shopee building high-scale e-commerce systems and shipping consumer mobile & desktop products via web end to end in scope of User Account & Notification. Experienced in designing, building, and delivering live applications, including an offline point-of-sale (POS) application that is hand tailored independently and currently available in Play Store. Experienced in system design, mobile application development, and full-stack software engineering.

WORK EXPERIENCE

Software Engineer (Web)

Jakarta

SEA Ltd. (Shopee)

Feb 2026 - Present

- Built and shipped responsive web applications (desktop & mobile views) embedded in the Shopee app within the User, Account, & Notification domain. [Tech stack: ReactJS, TypeScript]
- Leveraged AI agents to accelerate technical documentation (TD) authoring and implementation, delivering presentation-ready specs with significantly reduced turnaround time.
- Collaborated with product and backend teams to deliver user-facing account and notification features at high scale across Shopee's markets.

Software Engineer / Solution Developer (Mobile & Web)

Jakarta

Ernst & Young

Apr 2024 - Feb 2026

- Led a six-member Web Development Team as Acting Lead, overseeing an application used by over 3,000 Toyota dealer outlets nationally. [Tech stack: ReactJS, TanStack Query]
- Developed the Toyota Telematics feature for the mTOYOTA mobile app, now used by 30,000+ active users on App Store and Google Play. [Tech stack: Flutter]
- Bridged business requirements and technical feasibility to deliver solutions meeting client objectives; presented technical solutions during client pitches and led hands-on implementation from planning through delivery.

Software Engineer (TV)

Jakarta

Samsung Research Indonesia

Jul 2023 - Feb 2024

- Developed & maintained applications in Samsung TV including Ambient Mode (50+ QLED/Neo QLED models) and Art Mode (~15 'The Frame' models) for Samsung Smart TV lineup, deployed internationally in 120+ countries.
- Certified Samsung Professional Software Engineer, demonstrating expertise across advanced software development competencies.

Software Engineer Intern (Mobile)

United Kingdom

Cofounderie Ltd.

Apr 2023 - Jul 2023

- Designed and developed version management configuration for the Grumpy Royal app [Tech stack: Flutter, Firebase]
- Performed independent assessments of existing applications to identify defects, enhance UI/UX, and optimize application logic for improved usability and performance.

Software Engineer Intern (Backend)

Jakarta

Traveloka

Aug 2022 - Dec 2022

- Migrated 7 microservices from Auto Scaling Group EC2 to AWS ECS, reducing infrastructure costs by up to 40% and improving build speed by 100%. [Tech stack: AWS, Terraform]
- Developed and maintained features for an internal management system supporting the International Connectivity product, serving an estimated 200K-1M monthly customers across Southeast Asia. [Tech stack: Java Spring Boot, ReactJS, NextJS, PostgreSQL]
- Worked within the scope of Flight Order and Connectivity

Software Engineer Intern (ERP, Odoo)

Jakarta

Impact.

Feb 2022 - Apr 2022

- Developed custom Odoo modules for Sales Reporting and Inventory Management, implementing key features such as automated email notifications, scheduled actions (CRON jobs), role-based access control, and customized user interfaces. [Tech stack: Odoo, PostgreSQL]
- Designed and delivered Data Flow Diagrams (DFDs) to effectively bridge functional requirements and technical implementation, improving collaboration between business and engineering teams.

TECHNICAL SKILLS

Web: ReactJS (TypeScript), TanStack Query

Mobile: Flutter, Google Play Console (monetization, release management, policy compliance, etc)

Backend: Java Spring Boot, AWS (Lambda, DynamoDB, ALB), Go, PostgreSQL, Kubernetes, Docker

Other: System Design, Computer Network, Tizen OS, Linux, System Pipeline, CDN with AWS CloudFront

PROJECTS

Tokkoo - Offline POS App (Founder / Solo Developer)

2026

tokkoo.app / Google Play

- Built and published a point-of-sale (POS) and cashier application for small businesses using Flutter, with an offline architecture ensuring full functionality without internet connectivity.
- Designed and implemented the Full Access purchase infrastructure using AWS Lambda and DynamoDB, integrating with Google Play Billing and the Google Play Developer API to validate purchases and restore previously owned licenses across app reinstalls.
- Integrated ESC/POS thermal receipt printing for both standalone Bluetooth printers and integrated EDC terminals via platform channels.
- Localized the product into 50+ languages and implemented PPP-adjusted regional pricing across 143 Google Play markets, leveraging AI Agents for internationalization; distributed via SEO, ASO, and B2B app directories.
- Resolved Google Play policy compliance end to end, including migrating media permissions to the Android Photo Picker API.

mToyota - Telematics Feature (Software Developer at Ernst & Young)

2025

toyota.astra.co.id / Google Play / App Store

- Worked in a team analyzing complex telematics business rules and translated them into scalable application logic, authoring technical documents for backend infrastructure and deliverables for product stakeholders.
- Designed and developed telematics features for the mToyota mobile application using Flutter, covering feature architecture, system integration, and end-to-end implementation.
- Integrated mapping and location services using Google Maps to support real-time vehicle location, tracking, and geofence visualization.
- Designed notification workflows across mobile and backend systems, defining event triggers, delivery mechanisms, and user-facing behaviors for telematics alerts including application deeplinks.

EDUCATION

Universitas Indonesia

Indonesia

Bachelor of Computer Science

2023

- Teaching Assistant of Computer Networks
- Board of Department of Faculty Student Executive Board Student Affair
